New mammalian histamine H4 receptor proteins and polynucleotides encoding the proteins, useful in gene therapy for treating diseases where it is beneficial to elevate mammalian histamine H4 receptor activity.

Claim 13; Fig 5B; 92pp; English.

The present sequence is that of a mouse histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4

The invention relates to human and mouse G protein-coupled receptors

(GPCRs) and nucleic acids encoding them. The invention also relates to
sequences at least 90% identical to the GPCR proteins and nucleic acids
of the invention; methods of treating, preventing or diagnosing diseases
associated with GPCRs of the invention; methods of screening for
compounds useful in the treatment of GPCR related diseases, a transgenic
compounds useful in the treatment of GPCR related diseases, a transgenic
mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived
from the trasngenic mice; kits comprising several mice each of which has
comprising a GPCR transgene or in an endogenous GPCR gene; cells derived
from the trasngenic mice; kits comprising several mice each of which has
comprising a GPCR nucleic acid. The GPCR polypeptides and vectors
comprising a GPCR nucleic acid. The GPCR polypeptides and vectors
comprising a GPCR nucleic acid. The GPCR polypeptides and vectors
comprising a GPCR nucleic acid. The GPCR polypeptides and vectors
comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may
be used in the diagnosis, treatment or prevention of a wide variety of
diseases including neurological disorders (e.g., Alzheimer's disease,
disperders of the adrenal gland; disorders (e.g., Alzheimer's disease,
disorders of the adrenal gland; disorders (e.g., auciment);
compounders (e.g., auciment);
anaemia or leukaemia); immune disorders (e.g., aucimented archythmia or
ADDS; bone and joint disorders (e.g., aucimented disorders or
ADDS; bone and joint disorders (e.g., aucimented archythmia or
comprising sour or osteoporosis); methodic or nutritive disorders (e.g.,
anaemia or leukaemia); immune disorders (e.g., aucimented archythmia or
comprising disorders of the kidney, liver, lung, breast, ovary,
obesity, enzyme deficiency-related diseases or vitamin deficiency-related
comprision of the printed specification; those sequences not shown were obtained in
compression of the printed specification; those sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MLLEFLLPVISVAYFNVQIYWSLWKRRALSRCPSHAGFSTTSSSASGHLHRAGVACRTSN 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of a rat histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAMS0564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular disorders, non-insulin dependent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes transmembrane receptors, preferably human g protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AAB02859 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       121 SYRAQHTGIMKIVAQMVAVWILAFLVNGPMILASDSWKNSTNTKDCEPGFVTEWYILTIT 180

The full length hRUP7 cDNA was cloned By RT-PCR using human peripheral leucocyte cDNA as template. The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR agonists and antagonists for use as pharmaceutical agents. The proteins may also be antagonists for use as pharmaceutical agents.

are useful in the manufacture of a medicament for treating allergic disorders, including extrinsic asthma, immunological disorders, such as intrinsic asthma, vasculitic granulomatous disease, interstitial and other pulmonary disease, including chronic obstructive pulmonary disease other pulmonary disease, such as inflammatory bowel disease and neoplastic and myeloproliferative diseases. They are also useful for treating obseity, diabetes, metabolic, neurological diseases, psychotherapeutics, urogenital disease, reproduction and sexual medicine, inflammation, cancer, tissue repair, dermatology, photoageing, skin pigmentation, osteoporosis, cardiovascular, gastrointestinal diseases, allergy and respiratory disease, sensory organ disorders, sleep disorders and hair loss. The PFI-013 protein and nucleic acid are useful in the diagnosis and treatment of the above conditions and also for screening crung candidates for the treatment of diseases associated with signal transduction. The antibodies are also useful for enrichment of cosinophils from mammalian, especially human blood and for detecting the protein in biological samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 DFFVGVISIPLYIPHTLFEWDFGKEICVFWLTTDYLLCTASVYNIVLISYDRYLSVSNAV 120

                                                                                                                                                                                                   The present sequence is that of the human G protein-coupled receptor protein BG26, which shows significant homology with histamine H3, with activity of binding to histamine and capable of changing intracellular cAMP concentration in response to its stimulus. The protein is applicable as a tool in screening ligands or drug candidates for regulating signal transduction from such protein and treating diseases associated with its
                                                                                                                       G protein-coupled receptor protein BG26, with activity of binding to histamine and capable of changing intracellular cAMP concentration in response to its stimulus, applicable as tool in screening ligands or drug

WPI; 2001-316464/33 N-PSDB; AAH24007 Novel G-protein coupled receptor polypeptide and polynucleotide for treating cancer, autoimmune, pulmonary, cardiovascular and neurological disorders and for identifying modulators useful for treating asthma.

Claim 1; Page 50-51; 54pp; English.

the detection of mutations in the corresponding gene. AXOR35 proteins are also useful for inducing an immunological response in a mammal against also useful for inducing an immunological response in a mammal against the above diseases, and for antibody production. AXOR35 nucleotides are expression studies, and for producing transgenic animals useful in drug discovery. AXOR35-specific antibodies are useful for purifying the AXOR35 protein or fragments thereof, and are also useful for treating conditions sequence represents human AXOR35 protein. The present The invention relates to the human G protein-coupled receptor AXOR35 (AAB73621), to cDNA encoding AXOR35 (AAB74006), and to AXOR35 fragments and variants. Like all G protein-coupled receptors, AXOR35 has 7 putative transmembrane domains and is involved in signal transduction. AXOR35 has homology and structural similarity with G protein-coupled receptors such as the human histamine H3 receptor. The invention also relates to expression vectors and host cells comprising AXOR35 DNA, to recombinant expression of AXOR35, and to an AXOR35-specific antibody. AXOR35 proteins and nucleotides may be used to treat a wide variety of disorders including bacterial, fungal, protozoal and viral infections, particularly HIV-1 or HIV-2 infections; pain, cancers; benign prostatic hypertrophy; diabetes; obesity; anorexia, bulimia; osteoporosis; asthma; allergies; urinary retention; acute heart failure; hypertemical, ingina indian pertoris; myocardial infarction; stroke; ulcers; migraine; vomiting; pertoris; myocardial infarction; stroke; ulcers; migraine; vomiting; psychotic and neurological disorders such as anxiety, schizophrenia, manic depression, depression, delirium, dementia, and severe mental retardation, and dyskinesias, such as Parkinson's disease, Huntington's disease or Gilles de la Tourette's syndrome. AXOR35 proteins and nucleotides are useful as vaccines, and AXOR35 proteins, nucleotides and antibodies may be used in screening compounds for their ability to modulate AXOR35 activity or expression. Such AXOR35 modulators are particularly useful for treating asthma, and inhibiting or promoting the function of lymphocytes, macrophages, eosinophils or neutrophils in asthmatic lung. AXOR35 proteins, nucleotides and antibodies are also useful for diagnosing or determining susceptibility of an individual to a disease via the detection of abnormal levels of protein or mRNA, or via

Invention also discloses the use of these disorders, datus in screening disorders, or for the diagnosis of these disorders. GPCR-2067 nucleic disorders, or for the diagnosis of these disorders. GPCR-2067 nucleic caids may additionally be used to generate transgenic animals, including knockout animals, which may provide an integht into treating a variety of human disorders, and may also be used in the design of antisense conditions to suppressing expression of nGPCR-2067 in cells. nGPCR-2067, and GPCR-2067 modulators may be used to treat a wide variety of medical conditions, particularly mental disorders, central nervous system. Conditions, particularly MIV-1 or HIV-2 infections; pain; central nervous system, neurological and psychotic disorders such as Huntington's disease, schizophrenia, migraine, depression, anxiety, bipolar disorder, disease, and Parkinson's disease; proliferative disorders such as disease, and Parkinson's disease; proliferative disorders such as diabetes, dyslipidaemia, obesity, and metabolic disorders such as diabetes, dyslipidaemia, obesity, and concexia; thyroid disorders; cardiovascular diseases such as hypotension, thrombosis, inflammatory conditions, autoimmune disorders (e.g., rheumatoid arthritis); hormonal disorders; and renal failure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a novel human G protein-coupled receptor (GPCR) designated nGPCR-2067. Like all GPCRs, nGPCR-2067 has 7 putative transmembrane domains and is involved in signal transduction. The invention also relates to expression vectors and host cells comprising nucleic acids encoding nGPCR-2067, to recombinant expression of nGPCR-2067, to antibodies specific for nGPCR-2067, to drug screening methods that use nGPCR-2067, and to modulators of nGPCR-2067 activity. nGPCR-2067 nucleic acid sequences may be used to isolate nGPCR-2067 allelic variants and species homologues and may also be used in genetic mapping. The invention also discloses the use of nGPCR-2067 nucleic acids in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DFLVGLISIPLYIPHVLFNWNFGSGICMFWLITDYLLCTASVYNIVLISYDRYQSVSNAV 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotide, useful for identifying modulator compounds which are used for treating psoriasis, schizophrenia, diabetes, encodes the novel Cprotein-coupled receptor (nGPCR) polypeptide (nGPCR-2067).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MSESNSTGILPPAAQVPLAFLMSSFAFAIMVGNAVVILAFVVDRNLRHRSNYFFLNLAIS

The sequence was isolated by searching databases with the sequence of known G-coupled protein receptor (GCPR). The gene is used for recombinant production of HR and for preparing antibodies (Ab). These Ab are used to purify HR by immunoaffinity chromatography, in immunoassay of histamine receptor, to identify cDNA clones that express the receptor, as antagonist to block binding of histamine (for treating any histamine-associated disorder) and to generate anti-idiotypic antibodies. Agonists and antagonists of the HR protein can be used in the treatment of e.g. inflammation, asthma,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a histamine receptor. The polypeptide is useful for identifying an agonist or antagonist of a mammalian histamine receptor. It is useful as an antigen to elicit the production of antibodies. The histamine receptor polypeptide and polymucleotide are useful in the treatment and management of diseases such as inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infection, migraine, chronic obstructive pulmonary disease (COPD), rheumation arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis. They are also useful for modulating intracellular second messenger pathway activated through histamine receptors (cyclic-AMP, calcium, inositol phosphate and mitogen activated protein (MAP) kinase), changes in cellular growth rate, secretion of hormones, receptor-stimulated Ca2+
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   241 PGLKESAASRHSESPRRKSSILVSLRTHMNSSITAFKVGSFWRSESAALRQREYAELLRG 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of a human histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a bone marrow cDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               receptor activity. Recombinant protein is useful for identifying modulators of the human histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MSESNSTGILPPAAOVPLAFLMSSFAFAIMVGNAVVILAFVVDRNLRHRSNYFFLNLAIS

The invention provides an isolated histamine receptor, H4, which binds ligands comprising imidazole attached to amine by an alkyl chain. The H4 exceptor can be expressed by standard recombinant methodology. Cells expressing H4 receptor protein at a detectable level can suppress cyclic adenosine monophosphate (cAMP) formation when contacted with the H4 receptor and antibodies are used for identifying H4 receptor modulation of histamine H4 receptors is useful for treating transplanted organ rejection, asthma, allergies and autoimmune pathologies such as multiple sclerosis, type I diabetes, rheumatoid arthritis, cognitive and memory defects. The H4 receptor protein and nucleic acids are useful targets to identify drugs that are effective in treating disorders associated with histamine-regulated processes. Identification and isolation of H4 receptor provides for development of screening of molecules that interact with H4 receptors.
                                                                                                                                            Histamine receptor; H4; antirheumatic; antiarthritic; immunosuppressive; antiasthmatic; antiallergic; neuroprotective; antidiabetic; human; cerebroprotective; cAMP modulator; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New histamine receptor, termed H4 useful for detecting H4 (ant)agonists for treating transplanted organ rejection, asthma, allergy, multiple sclerosis and rheumatoid arthritis.

New G-protein coupled receptor polypeptides, useful for identifying modulators of signal transduction for treating kidney disease, hyperlipidemia, obesity, dyslexia and cardiac myxoma.

Claim 26; Page 61; 78pp; English

The present invention relates to a new G-protein coupled receptor (GPCR) polypeptide comprising greater than 70% amino acid sequence identity to the amino acid sequence of human GPCRS TGR62, TGR130.1, TGR130.2, human TGR213 or TGR22, 80% amino acid sequence identity to mouse TGR18 or 90% amino acid sequence identity to human novel edg receptor protein, as defined in the specification. The GPCR covalently linked to a solid phase is useful for identifying a compound that modulates signal transduction. The identified compounds are useful for treating kidney disease, cerebral covarenous malformations, hyperlipidenia, obesity, dysbaxia and cardiac myxoma. The molecules of the invention are useful for diagnosing disorders or conditions such as kidney-related conditions or diseases or such as renal failure, nephralitis, nephrolic syndrome, asymptomatic urinary abnormalities, renal tubule defects, hypertension and cardiac nephrolithiasis, liver-related disease or condition e.g. cirrhosis, infiltrations, lesions, functional disorders and jaundice and spleen-associated disorders and others. Modulation of the polypeptide of the invention is useful to treat or prevent any of the above conditions or diseases. The present amino acid sequence represents the human GPCR TGRE2 protein of the invention. Table invention. Table invention. Table invention and sequence represents the human GPCR TGRE2 protein of the invention. This sequence is one of seven novel G

Novel isolated G-protein coupled receptor polypeptide, AXOR35, useful for treating infections, gastrointestinal disorders, autoimmune disorders, urological diseases, cardiovascular diseases and cancer.

Claim 1; Page 22; 24pp; English.

The invention relates to an isolated G-protein coupled receptor

C polypeptide, AXOR35, (and its homologues and variants) and its encoding

C polypucideotide (and its homologues, variants, complements and RNA

cquivalents). Also included are an anti-AXOR35 antibody, an AXOR35

cquivalents). Also included are an anti-AXOR35 antibody, an AXOR35.

C expression vector, producing a recombinant host cell by introducing the

c expression vector, producing a recombinant host cell by introducing the

c expression vector, and inhibiting or promoting the function of

the host cell expressing AXOR35, identifying/screening for agonists or

antagonists of AXOR35 and inhibiting or promoting the function of

C lymphocytes, macrophages, eosinophils, or neutrophils in diseased tissue,

by administering to the patient AXOR35 agonists or antagonists. The

agonist or antagonist identified is useful for treating a disease such as

asthma, or for inhibiting or promoting the function of lymphocytes,

c asthma, or for inhibiting or promoting the function of lymphocytes,

c antagonist or sosinophils, or neutrophils in diseased tissue such as an

asthmatic lung. AXOR35 or polymucleotide is useful in diagnostic assays,

for identifying compounds that are agonists or antagonists of AXOR35, as

vaccines, or for transplant rejection, gastrointeetinal disorders (

c viral infections), transplant rejection, gastrointeetinal disorders (

c riritable bowel syndrome, vonditing, inflammation (such as tropic

dermatitis), allergy, autoimmune disorders (such as rheumatoid arthritis,

c arteriosclerosis, atherosclerosis, psychotic and neurological disorders

(such as migraine, anorexia, anxiety, schizophrenia), dypkinesias (such

c arteriosclerosis, atherosclerosis, psychotic and neurological disorders

(such as maigraine, anorexia, anxiety, schizophrenia), dypkinesias (

such as parkinson's disease, cancer, obesity, settoke, septic sphock, gareft

c cough, reans and osteoporosis. The present sequence represents human AXOR35

Sequence 390 AA;

Human G-protein coupled receptor AXOR35.
